

## Leveraging finance and resources to Build a Shared Vision

Involve **financial stakeholders** who have the potential to support your resilience actions and help them understand regional needs and opportunities by:

- Exploring the **role of private financing and investments** in regional climate adaptation efforts in the past and present and identifying possible new opportunities
- Gathering information on how **adaptation measures can benefit private actors** and their businesses, utilising existing best practices as examples

Identify the **changes needed** (in the appraisal methods and financing terms) needed to better achieve the vision

- Sustain your **integrated adaptation finance tracking**
- Allocate **sufficient resources**, including funding, staff, and time, to support participatory processes and stakeholder engagement activities, and ensure their effectiveness
- Identify **financial gaps and challenges** from previous implementation experiences

Implement a **strategic alignment of finance**, including:

- Ensuring that all **financial planning and investment** are directly **aligned with the long-term resilience** goals of the region and the goals of Theory of Change
- Prioritizing projects that offer the **highest impact** on climate resilience and leveraging finance that supports these goals
